

There's a lot to remember about the different parts of the **male reproductive system**. How much do you remember about the most important things?

1. Label the male reproductive system using these correct body part names:

**penis | testicles | urethra | scrotum.**

1. \_\_\_\_\_

2. \_\_\_\_\_

3. \_\_\_\_\_

4. \_\_\_\_\_

2. Match the name of the **male reproductive system body part** with the correct description. (You can colour match the body part to the description, or draw a line to join them up.)

**Penis.**

Pouch of skin that the testicles hang in below the penis.

**Testicles.**

Tube that carries the semen through the penis and outside of the body during ejaculation. The urine also passes through this tube, but never at the same time as the semen.

**Scrotum.**

Hang in the scrotum and produce hormones including testosterone and produce the male reproductive cell called sperm.

**Urethra.**

The male sexual organ. Can be flaccid (soft, floppy) or erect (hard, straight).

**Hint:** If you get stuck – go back and re-watch part of the video.

3. Write 1 reason why the male reproductive system is mostly on the **outside** of the male's body.

4. Tick the correct answer. What is the name of the male sex **hormones**?

Testicles

Testosterone

Progesterone
